

● LIVE ON ROBINHOOD CHAIN MAINNET

The prediction market for everything else.

Kalshi and Polymarket price the headlines. Hunch prices the long tail, starting with a daily market on every Robinhood Stock Token, on a payout rule that rewards whoever calls it first.

Call it early. Get paid more.

\$686M

USDG on Robinhood Chain, the dollar Hunch settles in

Held by 386,874 addresses, one signature away from a Hunch market.

Source: Read on chain 4663 and Blockscout, Sep 27, 2026

Prediction markets price the headlines. Everything else sits empty.

A trader asks

🔍 Will NVDA close UP today?

Today there are three answers, and none of them works.

✗ An options chain

65%

of S&P 500 options volume is now
same-day

The daily bet on stocks exists. Placing it takes a
strike, an expiry, the greeks and a spread.

Source: Cboe, May 2026

✗ A prediction market

9 in 10

dollars go to sports, crypto and politics

91% of Kalshi's volume and 90% of Polymarket's.
Stocks share what is left with everything else.

Source: Pew Research Center, data from The Block, Jul 2024 to
Apr 2026

✗ A long-tail market

70%

of Polymarket's markets never reach
\$10K

Listed, then left empty: 45,000 closed without a
single trade.

Source: CNBC analysis of Polymarket, 2021 to May 2026

The appetite for a quick call on a stock is proven. **Nobody serves it simply.**

The long tail is empty because nobody is paid to go first.

BID

0

No maker, no market

Someone has to quote both sides of every market. Market makers show up for the Super Bowl and the Fed, not for TSLA on a Thursday.

POOLS Tote, most on-chain pools

Tue 9:35 am

UP

Called it at the open

2.12x per dollar

=

Fri 3:55 pm

UP

Five minutes before the bell

2.12x per dollar

No first better, no market

Every winner is paid the same multiple, so the smart move is to wait, and nobody goes first. Operators close betting early to stop the snipers.

70.1% of the losing pool went to winners who arrived in the last 10% of a market (median, replayed tape)

→ Both are cold-start problems. **Pay whoever goes first, and any market can open itself.**

Pay whoever goes first. The market fills itself.

What a dollar on UP is paid, by when it lands

ILLUSTRATION

Will NVDA finish the week UP? The week, in trading hours.

Made-up bettors, the contract's exact arithmetic: seed 10 / 10 USDG, five bets, NVDA closes up.

Our settlement rule, the Vested Parimutuel, pays every new stake straight to the bettors already on the other side.

3.45×

The early call is paid the most

Mei called it Tuesday 9:35 am. An ordinary pool would pay her 2.12×

1.12×

A late bet still wins, never dilutes

Ben bet five minutes before the bell: his stake back plus the 6.25 that came after him.

No market maker, open until the bell

Our opening seed is floored in every outcome, so opening a market risks nothing.

Published

Each one is proved in our paper, The Vested Parimutuel

We published the rule, proved it, and replayed it on 779,549 trades.

playhunch.xyz/vpm-whitepaper**70.1% → 0.08%**

of the losing pool taken by winners who arrive in the last 10% of a market

An ordinary pool, then ours. Median over 5,173 replayed markets.

0 of 5,173

replayed markets where the opening seed lost money

Median return +248%. Why we can open every ticker, every session.

Seven properties, each proved

Matched exactly by our mainnet settler on all 118 conformance vectors

P1 Every dollar in is paid out

P2 A win payout only goes up

P3 Later money can't dilute you

P4 A last-second bet gets its stake back

P5 Same moment, same multiple

P6 The opening seed can't lose

P7 Blends with a classic pool predictably

Replayed tape: Hunch's four-week paper-money tournament, where most traders were agents deployed by participants (\$13.4).

As simple as UP or DOWN.

A same-day option, minus the options chain.

01 Pick a stock and a side

Will TSLA close UP today? Will NVDA finish the week UP? Daily and weekly markets on NVDA, TSLA, AAPL and COIN.

02 One tap. No gas, no ETH

Fund with USDC from Arbitrum or Base and it lands as USDG. One signature; Hunch pays the gas.

03 Paid at the bell

Chainlink’s prices at the opening and closing bell decide it. Winners are paid automatically; a stale price refunds everyone.

They found our public API and wired it in themselves, before our teams had ever spoken.

We earn when winners are paid. Opening a market risks nothing.

2%

of winners' gains, at settlement

- ✓ About 1% of volume on a balanced book, since winners' gains are roughly the losing side.
- ✓ No fee to enter. Losing bets pay nothing extra.
- ✓ Our opening seed is floored in every outcome, and lost money in 0 of 5,173 replayed markets: a revolving float, not a subsidy to a market maker.

What 1% of volume is worth

FILLS ITSELF →

WHY WE WIN THE LONG TAIL

01 A published rule, not a subsidy

Our paper's rule pays whoever goes first, and proves our opening seed can't lose. The thousandth market costs what the first did.

02 Already running

Our engine has settled 78,501 markets since May, and the rule is live on Robinhood Chain mainnet.

03 Built for agents too

SDKs, a 34-tool MCP server and x402 payments. Bankr's agents found our API and bet on their own.

From four stocks to a market on everything with a price.

A rule that lets any market open itself can list what no market maker would. Robinhood Chain gives us the prices, the dollars and the holders to start.

Raising a pre-seed round to put a market on every Stock Token, every session.

MONTH 1

Every Stock Token, every session

- External review of the settler and resolver; entry caps raised step by step
- Every Stock Token with a healthy Chainlink feed, daily and weekly
- Weekend markets, Friday close to Monday open

MONTH 3

Deeper markets, more takers

- Range markets: where does NVDA close Friday?
- A buy-back desk for early cash-out
- Agent API and MCP tools; playhunch.xyz markets settle on this rail

MONTH 6

A reference, not just a venue

- Earnings-week and index markets
- A market-implied weekend reference for Stock Tokens
- A legal opinion per target market and a licensing path

USE OF FUNDS

40% Engineering and security

Audit, a protocol engineer, the range-market and buy-back builds

25% Growth

Stock Token communities and Robinhood Wallet users in Asia and the EU

20% Market float

USDG seed to open every ticker, every session

15% Legal and licensing

An opinion per target market
