

● HUNCH VPM · LIVE ON ROBINHOOD CHAIN

Call it early. Get paid more.

Prediction markets on Robinhood Stock Tokens that pay the first correct call more than the last one, and stay open until the closing bell. In USDG, settled by Chainlink.

Live

on Robinhood Chain mainnet since Oct 2

78,501

markets settled by Hunch's engine since May

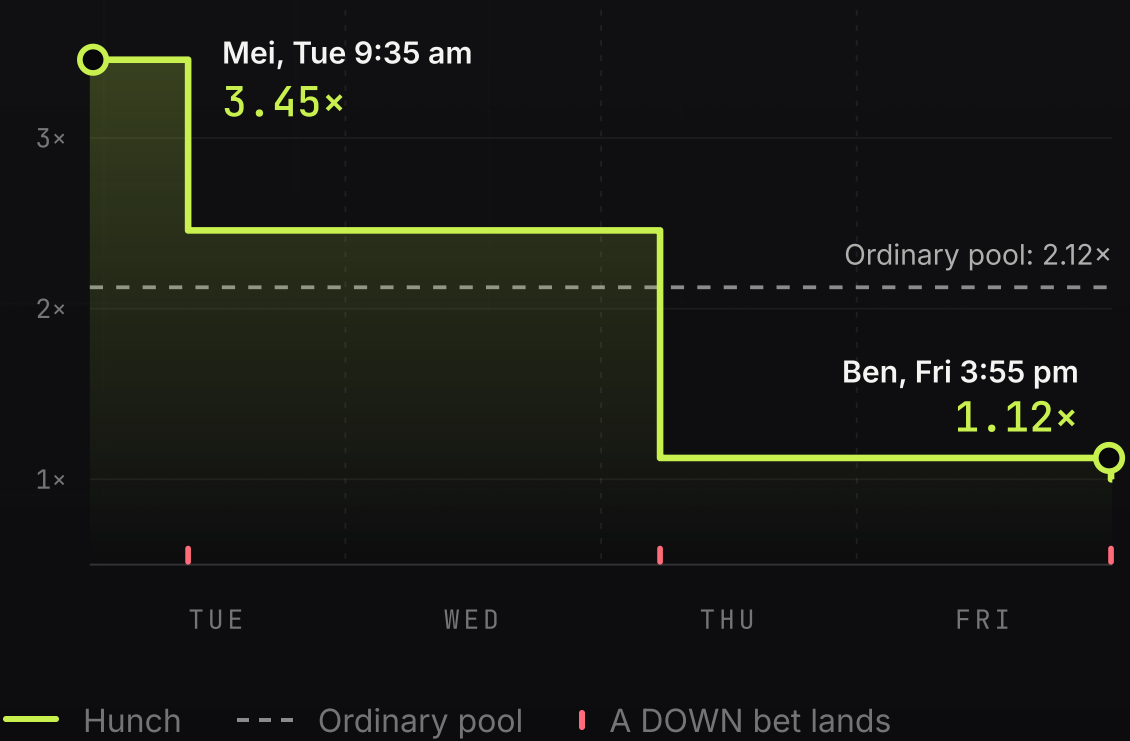

2%

of winners' gains: the only fee

What a dollar on UP is paid, by when it lands

ILLUSTRATION

Will NVDA finish the week UP? The week, in trading hours.

Every pool market pays the last dollar like the first.

In a pool (a tote, a sports pool, most on-chain prediction markets) the pot is split at the end, pro rata to stake. The dollar that lands at 3:59 pm, answer nearly known, earns what the 9:30 am dollar did.

Tue 9:35 am

UP

Called it at the open. Days of risk.

2.12x paid per dollar

=

Same multiple, whatever the timing

Fri 3:55 pm

UP

Five minutes before the bell.

2.12x paid per dollar

01

Nobody goes first

Early money is diluted by everyone who piles in later, so the rational move is to wait. Books open thin and stay thin.

02

Betting shuts early

To stop late sniping, operators close the window before the best minutes. The product goes dark just as attention peaks.

03

Order books skip the long tail

Kalshi and Polymarket need market makers quoting both sides. They show up for elections and the Fed, not for TSLA on a Thursday.

Pay the people who were already standing there.

The moment a stake lands, it is paid to the bettors already on the other side, and it is accepted only up to what they can cover. We call the rule the Vested Parimutuel.

OUR RESEARCH

The Vested Parimutuel

Karia, Hunch Research, 2nd ed., Sep 2026

Reference settler in Solidity · 118 conformance vectors · replayed over 5,291 real markets

TUESDAY 12:00 PM, IN THE WORKED EXAMPLE

DOWN Dan bets 30 USDG

paid at once to the UP side already standing there

Mei, bet UP at 9:35 am

20 → 40

Hunch's opening seed, UP

10 → 20

Mei's payout if UP wins doubled before the market was three hours old, and no later bet can take it back.

Early earns more

If you win, you are paid your stake plus every opposing dollar that arrives after you.

Nobody can dilute you

Your payout can only go up after you bet. Later money adds to it; it never shrinks it.

Open until the bell

A last-second bet gets its stake back plus what comes after it. Nothing to snipe, so nothing to close.

Our seed can't lose

Hunch's opening seed is floored in every outcome, so we can open every ticker, every session.

Same market, same side. Paid for the risk, not the timing.

Mei Tue 9:35 am • UP • 20.00 USDG Called it Tuesday morning and held through two days of bets against her.	Hunch pays		69.16	3.45×
	Ordinary pool		42.50	2.12×
Ben Fri 3:55 pm • UP • 50.00 USDG Bet the obvious side five minutes before the bell.	Hunch pays		56.25	1.12×
	Ordinary pool		106.25	2.12×
Ben still wins: his stake back plus the 6.25 that arrived after him. He just can't take Mei's reward.				

Will NVDA finish the week UP? Opening seed 10 / 10 USDG, five bets, NVDA closes up. Made-up bettors, the contract's exact arithmetic: replayed by our client and pinned by a Foundry test.

One signature. No ETH. Settled at the bell.

- 01

Fund in seconds

Send USDC from Arbitrum One or Base through Across. It lands as USDG on Robinhood Chain. No ETH needed.
- 02

Pick a side

UP or DOWN on NVDA, TSLA, AAPL or COIN. Daily: will TSLA close UP today? Weekly: will NVDA finish the week UP?
- 03

Sign once

A gasless USDG authorization binds market, side and amount. Our relayer pays the gas and can't change any of it.
- 04

Settled at the bell

Two Chainlink rounds, at the opening and the closing bell, decide it. Anyone can resolve; winners are paid automatically.

Refunded in full if the price doesn't move or a feed goes stale.

Stock Tokens have prices, dollars and holders. Not yet a market on this week.

Robinhood Chain puts every input on one chain: the Stock Token, a Chainlink price nobody types in, and a dollar that moves with one signature. Hunch turns them into a market that pays for being early.

WHAT NOBODY CAN DO, INCLUDING US

- ✗ Move a bettor's stake, or send it anywhere but to its owner
- ✗ Type in a price or choose the outcome
- ✗ Stop claims, refunds or resolution
- ✗ Change a listed market's feed, times, fee or caps
- ✗ Spend a bettor's signature on another market, side or amount

Every market refunds in full if the price didn't move, a price is stale or out of range, or the token's price is paused for more than a day. Owned by a 2-of-3 Safe.

Settler equals the paper's reference on all 118 published vectors, plus fuzzing

Production, Sep 29, 2026. Resolver-run markets prove the engine, not demand.

We earn when winners are paid. Listing costs nothing we can lose.

2%

of winners' gains, at settlement

- ✓ No fee to enter. Losing bets pay nothing extra.
- ✓ About 1% of volume on balanced books, since winners' gains are roughly the losing side.
- ✓ The seed can't lose: listing every ticker, every session, is a revolving float, not a subsidy.

Unit economics will be reported from chain data after the first month of markets, not projected.

8 years building in crypto. Three products taken from zero to real users.

- Founded Truts, the first search and discovery engine for Web3: 120K users, 40K MAU, \$200K revenue, a team of 11.
- Grew Questbook's (YC W19) developer community from zero to 16,000 and ran Polygon's \$1M grant program on it.
- CBO at E Money Network: 20K to 100K+ users in four countries; a crypto card to 10,000 users, revenue positive.
- Author of the Vested Parimutuel paper.

Raising a pre-seed round to put a market on every Stock Token, every session.

MONTH 1

Every Stock Token, every session

- External review of the settler and resolver; entry caps raised step by step
- Every Stock Token with a healthy Chainlink feed, daily and weekly
- Weekend markets, Friday close to Monday open

MONTH 3

Deeper markets, more takers

- Range markets: where does NVDA close Friday?
- A buy-back desk for early cash-out
- Agent API and MCP tools; playhunch.xyz markets settle on this rail

MONTH 6

A reference, not just a venue

- Earnings-week and index markets
- A market-implied weekend reference for Stock Tokens
- A legal opinion per target market and a licensing path

USE OF FUNDS

40% Engineering and security

Audit, a protocol engineer, the range-market and buy-back builds

25% Growth
